

Minnesota Administrative Rules

7007.0800 PERMIT CONTENT.

Subpart 1. **Scope.** The agency shall include the permit conditions specified in this part in all permits, except where the requirement states that it applies only to part 70 permits or only to state permits. The permit shall specify and reference the origin of and the authority for each term or condition, and shall identify any difference in form from the requirement giving rise to the condition. Nothing in this part shall be read to limit the agency's authority to put additional or more stringent terms in a permit, to conduct inspections, or to request information.

Subp. 2. **Emission limitations and standards.** The permit shall include emissions limitations, operational requirements, and other provisions needed to ensure compliance with all applicable requirements at the time of permit issuance. **The permit shall also include any condition the agency determines to be necessary to protect human health and the environment.** The permit shall state that, where another applicable requirement of the act is more stringent than any applicable requirement of regulations promulgated under title IV of the act (Acid Deposition Control), both provisions shall be incorporated into the permit and shall be enforceable by the administrator.

Subp. 3. **Emissions units covered by permit.** The permit shall cover any emissions unit within the stationary source for which there is an applicable requirement, and any unit which the agency believes should be covered in order to protect human health and the environment. However, if a stationary source is not a major source and the sole reason it is required to have a permit is because it is subject to federal standards described under part 7007.0250, subpart 2, then the permit shall only cover emissions units regulated by those federal standards. The permit shall include applicable requirements for fugitive emissions in the same manner as stack emissions, regardless of whether the source category in question is included in the list of sources contained in the definition of major source in part 7007.0200, subpart 2.

Subp. 4. **Monitoring.** The agency shall include the following monitoring requirements in all permits:

A. The permit shall require the permittee to comply with all emissions monitoring and analysis procedures or test methods required under the applicable requirements, including any procedures and methods promulgated pursuant to section 114(a)(3) or 504(b) of the act.

B. For part 70 permits, where the applicable requirements do not require periodic testing or instrumental or noninstrumental monitoring (which may consist of record keeping designed to serve as monitoring), the permit shall require the permittee to conduct periodic monitoring sufficient to determine whether the stationary source is in compliance with applicable requirements. The monitoring requirements shall be designed to yield reliable data from the relevant time period that are representative of the stationary source's operation, and shall require the permittee to use terms, test methods, units, averaging periods, and other statistical conventions that are consistent with the emissions limitations and standards contained in the permit, and with other applicable requirements. Record keeping provisions may be sufficient to meet the requirements of this item.

C. For state permits, where periodic testing or instrumental or noninstrumental monitoring (which may consist of record keeping designed to serve as monitoring) is not required by item A, the permit shall include monitoring requirements sufficient to determine whether a stationary source is in compliance with applicable requirements; if the agency finds that such monitoring is warranted by:

- (1) the likelihood of noncompliance;
- (2) the environmental impact of noncompliance; or
